Summary

Web **developer** with hands-on experience building React/Next.js applications and mentoring other developers through Frontend Simplified. I create responsive, performant, and accessible UIs and integrate third-party APIs (OpenAI, Stripe, Firebase, Supabase) to solve real user problems. I've completed multiple Python and web development courses and am actively growing toward full-stack and cloud-based roles. Authorized to work in the US with no sponsorship required.

Qualifications Profile

- 1+ year focused experience building modern frontend applications with React, Next.js, and TypeScript.
- Practical experience integrating REST APIs and third-party services (OpenAI Vision, Stripe, Firebase, Supabase) into production-like projects.
- Strong foundation in Python from university-level online courses, including data, web, and database modules.
- Experience mentoring new developers, leading workshops, and explaining technical concepts clearly.
- Comfortable working in remote, collaborative environments using Git, GitHub, and modern dev tooling.
- Committed to continuous learning, with multiple Coursera specializations and a full Frontend Simplified program completed.

Technical Skills

- Languages: Next.js, JavaScript, TypeScript, HTML, CSS, Python (introductory to intermediate)
- Frontend: React, Next.js, TailwindCSS, Redux, React Query, React Hook Form, Zustand

- Backend/Services: Firebase, Supabase, basic REST API integration, simple serverless functions
- Tools & Platforms: Git, GitHub, Vite, VS Code, Vercel, Netlify, Figma, Stripe, Jest, React Testing Library
- Practices: Responsive design, accessibility (WCAG-oriented), performance optimization, basic CI/CD and deployment, testing mindset

Professional Experience

Nissan Hood – Frontend (Freelance)

May 15,2026 – May 27,2026

- **Built a real-time car dealership website with Next.js 14 and OpenAI Vision API, focused on responsive UI, on the response for the appointment and prices on vehicles.**
- **Nextjs, Tailwind, Framer Motion, Lucide Reaction icons for UI icons.**

Skinstric AI – Frontend Engineer (Remote)

Sep 2024 – Present

- Built a real-time skin analysis web application using Next.js 14 and OpenAI Vision API, focusing on fast, smooth user interactions.
- Implemented responsive UI with TailwindCSS and animation libraries to make analysis results and recommendations engaging on desktop and mobile.
- Designed the user journey for uploading images, running analysis, and displaying results, including loading states and error handling.
- Optimized rendering and network usage to keep analysis responses under a few seconds, improving perceived performance and user satisfaction.
- Created reusable UI components and layout patterns that allowed rapid A/B testing of different recommendation card designs.
- Collaborated with the team using Git and GitHub (branches, pull requests, code reviews) to maintain code quality and consistency.

Frontend Simplified – Frontend Developer & Support Staff (Remote)

Mar 2024 – Present

- Selected as a peer mentor after ranking in the top of the cohort, providing one-on-one debugging help and code reviews for 20+ students' React/Next.js projects.

- Led workshops on optimization techniques (code splitting, image optimization, caching), helping students significantly improve portfolio load times.
 - Created written guides and sample code for React component architecture and TypeScript types, making it easier for beginners to build scalable features.
 - Organized weekly pair programming sessions focused on accessibility and SEO, guiding students to implement semantic HTML, ARIA attributes, and basic on-page SEO.
 - Helped students set up deployment pipelines using GitHub + Vercel/Netlify so each push automatically deployed their projects.
 - Provided feedback on UI/UX, encouraging patterns that improved clarity, consistency, and mobile-first design.
-

Technical Projects

CarePulse – Hospital Management Web App

- Built a modern hospital management interface that streamlines appointment scheduling and management for patients and administrators.
- Implemented flows for creating, editing, and canceling appointments with validation to prevent invalid or overlapping bookings.
- Designed separate views for patients and admins using conditional rendering and role-based navigation patterns.
- Used React and state management (such as React state/Zustand/Redux) to keep the UI synchronized with appointment data.
- Ensured responsive layouts so the app works well across mobile, tablet, and desktop devices.
- Deployed the app to Vercel or Netlify and documented setup steps in a README so others can easily run and test it.

Finance Tracking – SaaS Dashboard

- Created a web dashboard that allows users to track income and expenses, categorize transactions, and assign them to specific accounts.
- Designed clear visual hierarchy with tables, summaries, and potential charts to help users quickly understand their financial situation.

- Implemented filters and basic search so users can focus on specific categories, dates, or accounts.
- Used local or remote storage (such as Supabase/Firebase or local storage) to persist user data.
- Focused on UX details like input validation, helpful error messages, and empty-state designs for a polished experience.
- Deployed the project and linked it to a public GitHub repository showcasing clean, readable code.

Additional / In-Progress Projects

- Simple E-commerce Store (React/Next.js) – product listing, cart, checkout flow with Stripe test integration.
- Personal Portfolio Site – responsive multi-page site highlighting projects, skills, and a contact form.

Education & Certifications

- Frontend Simplified – Frontend Development Certificate, 2023- Present
 - Covered HTML/CSS, JavaScript, React, Next.js, UI/UX responsive design, deployment, and real-world project work.
- Coursera – Python for Data Science, AI & Development
- Coursera – “Python for Everybody” Specialization (University of Michigan) – completed
 - Python basics, data structures, accessing web data, using databases with Python, and a data visualization capstone.
- Coursera – Data & AI / Web-Related Courses (in progress):
 - The Data Science Profession
 - AI for Beginners
 - Using Databases with Python
 - Using Python to Access Web Data
 - Programming for Everybody (Getting Started with Python)

Additional Information Soft Skills: Clear communication, patience when mentoring, problem-solving, attention to detail, and willingness to learn.

- **Community & Learning:** Regularly participate in online developer communities, tutorials, and coding challenges to expand skills.
